

## Diane Turner Analytical Chemist

I work for my own company Anthias Consulting Ltd. As a Consultant, I give advice, training, method development, applications support and instrument demonstrations in Gas Chromatography and related techniques.

My background is in analytical chemistry. After working in a contract environmental lab, I completed an MSc at the University of Warwick where I developed a Gas Chromatography technique at Zeneca Agrochemicals (now Syngenta). I then worked as an Applications Scientist for a Gas Chromatography distributor, setting up an Applications Laboratory. I worked there for five and a half years. I left in 2005 to set-up my own business.

I enjoy visiting a huge variety of laboratories, working on many different applications with lots of interesting people. I help them to develop and optimise their methods and train them to use all aspects of their instrument and software. This often results in time saving and reduces many laborious instrument and data analysis tasks! I aim to continue specialising in Gas Chromatography, growing my business while keeping in a flexible and enjoyable job!
