

Jenny Koenig Science Education and Communication Consultant

I am a science education and communication consultant through my own business Science ETC. I also have a part-time position as Dean at Lucy Cavendish College, University of Cambridge, where I teach medical and veterinary students in pharmacology

I have a degree in Chemistry and Pharmacology and a PhD in Molecular Pharmacology. After my PhD, I worked for 12 years in academic research using mathematical modelling to understand the mechanisms involved in the desensitisation that occurs on prolonged treatment with drugs. In 2004, I decided to move into science education and communication and have gradually built up my work in e-learning development, delivering training courses for a variety of audiences and science communication for schools and the general public.

I enjoy communicating science and particularly like the challenge of adapting my way of speaking and approach for different audiences. I'm fascinated by how to capture people's attention and how to get them thinking and talking and understanding through a practical and active approach. Setting up my own business has been a challenge and I've learned an enormous amount through all the courses that are available in this region and from the people I've met through Cambridge AWiSE and Enterprising Women. My ambition is to be able to continue to learn new things and to develop myself and at the same time be able to define my own work-life balance.

$$4.3 \times 10^{-12}$$
$$\log_{10}(D) e^{-kt}$$
$$E = \frac{D}{D + K_d}$$
